

## ELF-Introduction with Code

---

You should read the task description as part of the reading material.

Make sure you know all of [Lab 7 reading material](#) well. In particular, it is very important that you understand [this picture](#).

In addition, you should read about the *mmap* system call. Read about it both in *man mmap* and [here](#). Make sure you understand the different modes and flags in *mmap*, and how these relate to the *open( )* system call.

For lab 8 you should also read the material on **relocation tables** in the ELF manual, and familiarize yourself with the members of the structured types `Elf32_Rel` and `Elf32_Rela`.
